

# Stay Ahead of the Curve

Support your tenants who use dockless devices (e-scooters, e-bikes) to commute to work. Installing solar powered dockless charging stations can help drive more traffic to your residential, commercial, hotel, and retail property.

## Value to your Property

- Reduce number of scooters improperly parked
- Compliment your building's sustainability efforts
- Improve traffic for retail spaces
- Help retain current tenants and attract new ones
- Solve first-mile last-mile obstacle for commuters at your building

## How Does it Work?

You can pilot a new dockless charging station at your property for 60 days. The program is free of charge, and will help your building stand out from the competition:

- No extra work for you
- Power outlet is ideal but not required
- Limited number of stations available

Arlington Transportation Partners can help you get started. Contact us at [solutions@transpartners.com](mailto:solutions@transpartners.com) to learn more.
